

Challenge - Photo filter

The business have left some feedback that they would like another filter to allow the users to choose to only display members who have a photo.

You have been given this task to complete.

1. Since all the demo users have a photo you will need to update the DB and remove the image for a user to test this.
2. The Switch component from HeroUI is the ideal component for this task
3. A prisma query to get something that is not null would look like this:

```
1  where: {image: {not: null}}
```
